

Automotive Information Security Management: DAM achieves prestigious TISAX® certification

DAM can now boast of being one of the very first French companies to be certified by TISAX (Trusted Information Security Assessment Exchange), a standard defined by the VDA, the German association of the automotive industry, which guarantees the highest possible level of protection of information and know-how in the face of increasing cyber attacks.

Villeurbanne, September 17, 2021: Awarded by ENX, the governing body of this certification, TISAX® is specifically tailored to the expectations of the automotive industry, driven by major car manufacturers such as Audi, Daimler, Mercedes, Volkswagen.

Based on an information security management system (ISMS) similar to ISO 27001, the objective is to guarantee customers the implementation of concrete measures that reinforce the security of their information, whether in physical or IT form.

In order to obtain this certification, DAM has implemented a series of procedures aimed at strengthening information security: data security, server security, transaction security, and all interactions with the outside world. This work involved all the company's departments and now enables it to offer a guarantee of protection for its customers' information, but also to tangibly reinforce the security of the DAM group's key information.

"It was a great team effort to obtain this certification, which is a real asset for the organization and reassures our customers in all areas of activity," says Delphine SERMET, Information Security Management System Manager.

With the increase in cyber attacks, DAM, with the help of CLV Management, has made it its duty to carry out this approach to protect the increasingly sensitive information entrusted to it by its customers. Protecting information has become a vital issue, and those who know how to guarantee it have a real competitive advantage in their market.

"Our teams worked hard to obtain this certification, which attests to our ability to protect information and know-how at the highest level. The result is there: German equipment manufacturers and carmakers all include us in their panel!" underlines Guy CREPET, founder and manager of the DAM company

About DAM Group

For more than 30 years DAM group has been designing turnkey test and measurement solutions for the Automotive, Aeronautic and Aerospace industries.

Our experience and expertise in Instrumentation & Software, electronic, automation and mechanical Engineering enables DAM Group to offer state of the art custom built instruments, and complete manufacturing and testing lines. The 60 strong group is established in several locations in France and China.
